

RES-Q database package

June 18, 2019

Change in the `Reports.py`:

1. Export into excel workbook was added. All created dataframes (thrombolysis, thrombectomy and stats per region) were added into this spreadsheet. Each month is in the single spreadsheet.
2. Based on spreadsheet stats small bug in the calculation of incorrect times has been discovered. When the incorrect times were calculated, only times in minutes calculated from timestamps were taken into consideration but we forgot to calculate also times entered in minutes.

Regenerate documentation using `sphinx` package.

1. Go to the folder docs in the package.
2. Run command:

```
sphinx-apidoc -f -o source/ ../  
make html
```

This command will regenerate documentation in the html format.
